

The Future

Martin Aerospace for the last few years have been working closely with the local schools in South Lanarkshire and North Lanarkshire on their work experience scheme. This gives fourth year pupils the chance to work for one week in an aerospace engineering company when they are here they shadow a number of employees and learn about machining and quality

Over the years we have found this to be great success as it gives us the chance to look for future engineers than can be recruited into our apprentice ship scheme

Our latest two apprentices have just completed their first year at East Kilbride Training Center with one of them coming through the work experience scheme. Both have done very well in their first year and both won awards

Alexander Baxter was part of a project team who won the Chairman's Award.

Taylor Barr won the Walker Precision Cup for conventional turning.

Taylor Barr

Our latest three apprentices are now at the training center and we wish them great success on their first year.
